ProJob Collection 2021

Quality. Function. Ergonomics.

MÄLDIM

A P

# ProJob Collection 2021

## Looking back at the future.

When we will be able to look back on what is now the future, we at ProJob will most likely be aware and hopefully quite proud that we were on the right place in the right time for making a difference. That we contributed largely to adding and spreading function and ergonomics to workers far beyond our own boundaries.

We supplied workers in Asia, the Americas and in every corner of Europe with a new kind of workwear, the kind that adds comfort and personal protection to the working day, boosting productivity, dropping work related injuries and absence due to illness.

We will take satisfaction in the fact that we never aimed to be the volume leader but a dedicated and uncompromizing contributor to the future of workwear and the development of sustainable production.

We have come far but we will go further.

The future is still ahead.

### DISCLAIMER REGARDING THIS CATALOGUE

Prices in this catalogue are recommended prices. VAT, freight and other costs referable to e.g. marking is not included. Projob Workwear reserves itself regarding price changes due to changes in condition beyond our control, such as changes in raw material and production prices, currency changes etc. Projob Workwear also reserves itself regarding printing errors and deviations in color resemblance.

# Halfway

Every moment and every phase is extremely carefully planned. The operation may look hazardous, but in fact the security margins are quite high and the team goes through and discuss each step a number of times.

In the border region to Norway, a huge wind park is under development. To assess the conditions on each spot where a new wind power turbine is projected, a temporary mast is erected and fitted with analysis equipment. After evaluation, the mast is disassembled. A job for the climbers of V Pro AB (V for Vertical), specialists in high altitude work.

We go to the end of the road in the middle of nowhere and there we turn right. The supply road through the woods was laid out some 6 years ago and at some points hardly visible. On our GPS we see that there is still almost 5 km to the site of the 120 m mast, which we still are unable to see.

The crew from V Pro are experienced and nothing is left to chance. They will spend two days in this remote place, one day to prepare the mast and loosen all bolts that might be stuck through corrosion, one day to lift the sections one by one with the help of a helicopter. Everything has to be planned in the smallest detail, all the wires have to be disconnected in a certain order and the men working

Niklas von Heidemann has climbed since childhood, now it is both his job and his leisure hobby.

# to Heaven

halfway to heaven must be secured in every step of the operation. The actual lift can not take more than an hour if the safety margins are to be kept. Weather conditions are observed on an hour by hour basis on this normally quite windy place.

Firmly positioned on a big mossy stone on some distance from the mast, Thomas Olofsson is giving instructions over the radio headset to Niklas and Jonatan in the top of the mast. His coolness is remarkable even when the meticulous plan has to be revised at some point. The entire crew is quite senior in the high altitude business and they also give courses in climbing and climbing security.

On day two the weather is ideal and the helicopter arrives at punctually at 9 o'clock. A new safety brief is held. Everyone goes to their stations. The time schedule holds, within an hour the 11 sections of the mast and a few kilometers of cables and wires are neatly placed on the ground a few hundred meters from the concrete base.

Just another day at work for V Pro.

The gear is essential and V Pro has used ProJob workwear for over 10 years.

The operation takes place in a quite remote place and everything has to be brought along.

## Critical minutes in the air

A helicopter can only hoover on one spot for a limited number of time, then it rapidly loses bouyancy due to airstream properties.

Every section of the mast is prepared with attachment strings and the bolts and the wires are loosed from the mast and from the ground simultaneously. Several sections can be lifted in the same operation, but weight, wind and other preconditions makes calculation necessary for each specific lift.

# Sustainability & Future

New Wave Group has two main strategies to decrease our environmental impact and to cut our emission of greenhouse gases. First of all, we must influence the transportation companies that we are working with. Our membership in "Clean Shipping Index" aims to impact the shipping companies to use cleaner vessels by ranking the most high-performing ships. The Group works with some of the largest transportation companies on the market, all of which have environmental programs in place for their operations.

Secondly, we always strive to improve our internal logistics and work methods. Within our group of companies, we club together as much as possible of our shipments and transportations. In addition to protecting the environment, sustainable solutions can also contribute to the streamlining of our operations.

To learn more about our Code of Conduct and our sustainability work, please visit The New Wave Group's homepage: [www.nwg.se](http://www.nwg.se)

We have the possibility to contribute and make a difference through our global operations. ProJob is a part of New Wave Group. New Wave Group is working with social and environmental sustainability under the

term CSR (Corporate Social Responsibility). As our customer, you are supporting this work.

## WE LIKE SUSTAINABLE PRODUCTS

New Wave Group believes in classic design and good quality products - a concept that will never be out-of-fashion. We hope you will enjoy our products for a long time. All products can be customized to your precise demand, which is a good way to ensure long-lasting use and sustainable consumption.

It is important to New Wave Group that our products are safe and free from restricted chemicals. New Wave Group is a member of the Swedish Chemicals Group at Swerea IVF to receive the most updated information on legislation and developments. This supports our active work to reduce and replace chemicals in line with best available technique. All our suppliers must follow the requirements in our Restricted Substance List. The list has been designed in accordance with legislations such as REACH, but also taking into account industry recommendations and standards. As a result, our requirements are often stricter than the applicable legislation.

## IMPROVING WORKING CONDITIONS

New Wave Group is never far away from the manufacturing of our products. Being represented on site enables us to have a close partnership with our suppliers and to actively monitor their business operations. We have a CSR-team, which consists of full-time staff dedicated to visit our suppliers, monitor and support them with various social and environmental topics.

As a member of BSCI, New Wave Group has adopted the BSCI Code of Conduct. It contains requirements on minimum wage, working hours and the prohibition of child labour, among several other requirements from international conventions like to ILO Conventions and the Declaration of Human Rights. New Wave Group has a commitment towards BSCI to engage our

suppliers in third party examination by independent auditors. Having both internal and external audits is a quality assurance to us. We strive for constant improvements and continuous development.

New Wave Group is a signatory member of the pioneering Accord on Fire and Building Safety in Bangladesh. The Accord is a binding contract between brands, international and local trade unions and NGOs. Its aim is to make all garment factories in Bangladesh safe workplaces, which includes a program of safety inspections and a commitment to ensure that the necessary repairs and renovations are carried out. The Accord will have significant impact on the daily lives of millions of textile workers in Bangladesh. We are proud to be a part of this project.

# Classification Guide EN ISO 20471

Reflective clothing is personal protective equipment. Personal protective equipment are products that are designed to be used by a person for protection against health and safety risks.

The special demands placed on personal protective equipment in Europe are described in EN-norms. Products that pass these basic safety requirements are allowed to carry the obligatory CE-mark. In order for a safety product to be approved and marked with the CE mark, it must have been tested and certified by an authorized organisation.

## HIGH-VIS CLOTHES FOR PRO USERS

These have to be CE-marked and approved according to the norm EN 471 or EN ISO 20471. The norm describes among other things what colours are permitted, where on the clothes the reflecting material is to be placed, and which information that must accompany the clothes. The design of the clothes must also follow certain criteria in order to achieve the best possible visibility. In the norm there are three classes. The norm specifies how much fluorescing cloth and how big the reflective area reflective clothes of each class must have.

### CLASS 1

This gives the lowest level of protection. The total fluorescent area must be at least 0.14m<sup>2</sup> and the reflective area 0.10m<sup>2</sup>. May only be used if there is little contact with a few vehicles and/or slow moving traffic.

### CLASS 2

Gives a much better protection than class 1, especially in daytime, twilight and fog. The total fluorescent area must be at least 0.50m<sup>2</sup> and the reflective area 0.13m<sup>2</sup>. Class 2 is used in harbours, on railways, building sites, parking places, cross country searches, load bearing vehicles and other places where class 3 is not required.

### CLASS 3

This gives the highest level of protection. The total fluorescent area must be at least 0.80m<sup>2</sup> and the reflective area 0.20m<sup>2</sup>. To be used in the proximity of fast moving traffic.

### EN ISO 20471 / EN 471

EN ISO 20471 is the latest update of the norm, since this came, garments can no longer be certified according to EN 471. Therefore all new products are certified under the new norm. ProJob is working to gradually update all High Visibility garments in the collection according to the new standard. EN 471 is still fully approved to use and will be so for many years to come.

# MATERIALS & FABRICS WE USE

## PRO DRY™

ProDry™ are the materials you wear closest to your skin. They transport moisture and allow it to pass to the outer layer. With ProDry™ there you don't have to have damp and cold garments next to your body.

## PRO THERMAL™

Pro Thermal™ are the materials that afford effective insulation against both heat and cold. The materials detect and dispose of surplus heat at the same time that they keep out unneeded cold. Pro Thermal™ keeps body temperature at an even and pleasant level all day.

## PRO VENT™

Pro Vent™ are the materials with high breathability. They let out moisture and superfluous heat. They withstand rain, snow and wind. Pro Vent™ are resilient, protective materials worn on the very outside.

## PRO TEC™

Pro Tec™ are the materials that afford effective protection against exterior effects. They are very resistant to wear and to tearing. Pro Tec™ is suited to extremely strenuous work in rough environments.

## COTTON

Cotton is a soft and comfortable natural material. It insulates and ventilates. One of cotton's advantages is that it does not melt when exposed to flames and sparks and that it is difficult to set fire to. Our heavy-duty cotton twill is extra sturdy and durable. This is possible because we ourselves are involved in and direct development from fibre to final production.

## POLYESTER/COTTON

The combination of cotton and polyester have proven perfect for making long-lasting garments. The breathability of cotton combined with the durability and colourfastness of polyester make garments in polyester/cotton keep their shape and colour longer. Clothes in polyester/cotton are therefore an excellent choice for hard work that places great demands on both the wearer and the garments.

## SPUN DYED

Using the traditional dyeing method, the finished fabric is dipped in a dye bath, before being rinsed and then dried. With the spun dyed process, the colour pigment is added before the fibre is spun and the fabric subsequently woven/knitted.

In this way the colour becomes part of the fibre. The woven/knitted fabric achieves much better colour fastness, making it better able to withstand washing, wearing, sunlight and bleaching.

In environmental terms, spun dye is much more eco-friendly than the traditional method of dyeing. As it eliminates a stage in the dyeing process, consumption of energy, chemicals and water is significantly reduced.

# MATERIAL DETAILS

## VENTAIR™

VENT AIR® is wind and waterproof with breathability. VENT AIR® keeps the body dry and cool while protecting against the forces of weather. The material consists of three-component high-tech weave, a functional material with a coating on the inside and a water-repellent treatment on the outside.

## CORDURA®

Cordura® is DuPont's brand of extremely durable polyamide material. It is three times as strong as standard polyamide, up to seven times as strong as cotton and yet is fine and supple. We use it primarily as reinforcement in places that are exposed to hard wear.

YKK is a market-leading brand in zippers. The products are of high quality and set the standard for other players in the market.

3M Scotchlite™ person reflex material makes you extra visible when it's dark and the view is bad. The material reflects bright white when it's lit up by the headlights of a vehicle, also when the wearer stands beside the road. 3M Scotchlite reflex material for protective garments exceeds the highest reflex category of the European standards for reflective protective garments, EN ISO 20471, as well as all strict, standardised tests.

Coats epic has set a new standard in the thread market. It consists of a core of polyester fibre around which is spun yet another polyester fibre. The combination makes for a thread with maximal tensile strength, which results in seams with extreme durability.

Duraflex is the trade mark of the high-quality buckles used in ProJob clothes, belts and carrying systems.

PrimaLoft is a leader in advanced material technology, producing sustainable synthetic insulation products. PrimaLoft insulation has been designed to mimic all of them fantastic properties of down, but PrimaLoft goes one step further and provides excellent protection even in wet weather. PrimaLoft fibers are treated so that they do not retain water which makes you stay dry in all weathers. The synthetic insulation mimics the heat-giving properties of down with materials that catch and preserve your body heat.

# WASHING INSTRUCTIONS

# CHOOSE SIZE CAREFULLY

## WASHING

All our garments are properly tested. Each of our garments has its own washing instructions, and it's important to follow these. If a garment is always washed with similar colours and at the recommended temperature, it will stay looking good for longer. "Wash separately" in the washing instructions means that the colour of the fabric may run – for these garments, which may initially have a little extra dye, it is particularly important to follow the washing instructions.

## PREWASH

Use the same amount of detergent as in the main wash cycle when prewashing very dirty clothes, but skip the prewash cycle completely for less dirty garments. Soaking garments is not recommended due to the damage which undissolved detergent can do to fabrics.

## DETERGENT

Always be sure to use the correct amount of detergent – see the detergent packaging. Choose a bleach-free detergent which is suitable for the temperature of the wash.

## DRYING

Only tumble dry as a last resort – if you have enough time and space, hanging garments out to dry is recommended as this is better for your clothes. Smooth out the fabric and the seams before hanging up a garment. When tumble drying, the garment should never be completely dried, as this causes unnecessary wear and can cause shrinkage.

Size is extremely important when it comes to work clothes – it affects function, wear and ergonomics. ProJob clothing is designed with flexibility in mind. Clothes that are the wrong size prevent the wearer from moving around freely. Pockets and other functional details which are used repeatedly during the working day need to be positioned where they can be reached easily. If the clothing is the wrong size, either the positioning of the pockets will force the wearer to make strenuous movements, or the pockets will serve no purpose at all. It's also extremely important for the knee protectors to be in the right place to prevent unnecessary wear. The size also affects how long clothes last – the tighter the garment, the greater the strain on the seams and the fabric.

The ProJob collection includes sizes to meet every need. Almost all our tops are available in XS–4XL and almost all our trousers are available in C44–C62, D84–D120 and C146–C156 (see Size Guide page 205 for details).

Shows the recommended wash temperature

Delicate cycle

Do not use chlorine bleach

Dry-clean, but do not use chemicals stronger than perchloroethylene

Do not dry-clean

Do not tumble dry

Tumble dry on low heat (50°C)

Cool iron –110°C max, suitable for nylon

Cool iron –150°C max, suitable for polyester/cotton

Cool iron –200°C max suitable for cotton

Do not iron

Professional leather clean

Do not wring

Hand wash only
